

INTELLIGENT TRUCK PARKING – URSA CZ

PROJECT GOAL

Goal of URSA CZ is to gather, process and publish realtime information about availability of truck parking on highways.

CUSTOMER: Directorate of roads and highways

CONTRACTOR: SPEL a.s.

SUBCONTRACTOR: INTENS Corporation s.r.o.

PROJECT EXECUTION

For our customer Directorate of roads and highways we have developed, deployed and now operate central software ITP Intelligent Truck Parking. This system receives and processes realtime information about availability of individual parking spaces on selected service stations. The system also monitors performance and functionality of individual detectors to ensure trustworthiness of the information.

Our role was to create implementation analysis, software implementation, deployment, testing and operation in production environment. We do continuously support enrollment of new service stations into the central system.

EXECUTION AND TESTING

Q1 2022 – Q2 2023 with continuous operation
